MAWD15935: A Large-Scale Manchu Archives Word Dataset

Supplementary Material

We further discussed the details of resource encoding in our dataset through the following supplementary materials:

• Appendix A: Illustrations of partial special cases

• Appendix B: additional statistical analyses

A. Explanations of Certain Special Cases

(1) M002 :When the Manchu letter (ᡳ) is preceded by a vowel and followed by a consonant, its Latin transliteration is "n". When it appears after the letters k (ᡴ, ᡵ), g (ᡶ, ᡷ), h (ᡸ, ᡹), t (ᡨ, ᡩ), or d (ᡪ, ᡫ), its Latin transliteration is "e". Except for these two special cases (i.e., "e" and "n"), when (ᡳ) occurs in the middle of a word, its Latin transliteration is "a".

(2) M003： When the Manchu letter (ᡴ) is preceded by a vowel, its transliteration is "n". When the Manchu letter (ᡴ) appears after the letters t (ᡨ, ᡩ) or d (ᡪ, ᡫ), its transliteration is "e". Except for these two cases (i.e., "e" and "n"), when the letter (ᡴ) occurs at the end of a word, its transliteration is "a".

(3) M004: When the Manchu letter (ᡵ) appears after the letters k (ᡴ, ᡵ), g (ᡶ, ᡷ), or h (ᡸ, ᡹), its transliteration is "e"; when it occurs after the letters b (ᡝ, ᡞ), p (ᡟ, ᡠ), kk (ᡴ, ᡵ), gg (ᡶ, ᡷ), or hh (ᡸ, ᡹), its transliteration is "a".

(4) M014: When the Manchu letter (ᡠ) appears after the letters k (ᡴ, ᡵ), g (ᡶ, ᡷ), h (ᡸ, ᡹), t (ᡨ, ᡩ), or d (ᡪ, ᡫ), its transliteration is "u"; except for this special case (i.e., transliteration as "u"), when the letter (ᡠ) occurs in the middle of a word, its transliteration is "o".

(5) M015: When the Manchu letter (ᡠ) appears after the letters t (ᡨ, ᡩ) or d (ᡪ, ᡫ), its transliteration is "u"; except for this special case (i.e., transliteration as "u"), when the

letter (ᡳ) occurs at the end of a word, its transliteration is "o".

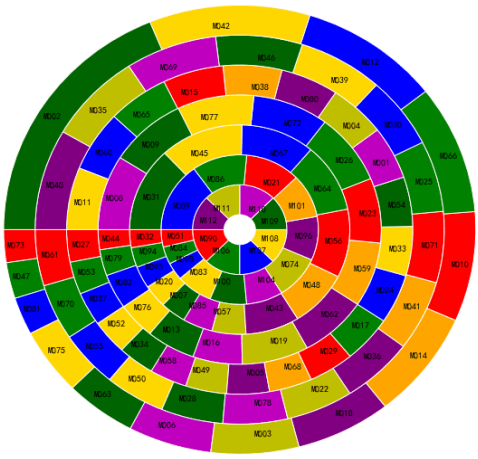
(6) M016: When the Manchu letter (ᡴᡠ) appears after the letters k (ᡴᡠ, ᡴᡠ), g (ᡬᡠ, ᡬᡠ), or h (ᡭᡠ, ᡭᡠ), its transliteration is "u"; except for this special case (i.e., transliteration as "u"), when the letter (ᡴᡠ) occurs at the end of a word, its transliteration is "o".

(7) M078: When the Manchu letter (ᡠ) is followed by the vowels a (ᡳᡳᡳ, ᡳᡳᡳ) or e (ᡳᡳᡳ, ᡳᡳᡳ), its transliteration is "w"; when it is followed by the vowels i (ᡳᡳᡳ, ᡳᡳᡳ), o (ᡳᡳᡳ, ᡳᡳᡳ), u (ᡳᡳᡳ, ᡳᡳᡳ), or uu (ᡳᡳᡳ, ᡳᡳᡳ), its transliteration is "f".

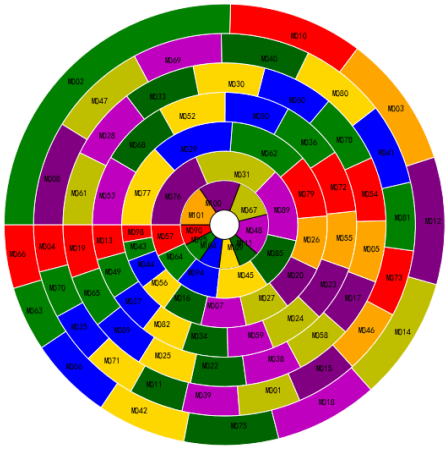
(8) M080: When the Manchu letter (ᡠ) is followed by a (ᡳᡳᡳ, ᡳᡳᡳ) or e (ᡳᡳᡳ, ᡳᡳᡳ), its transliteration is "w"; when it is followed by i (ᡳᡳᡳ, ᡳᡳᡳ), o (ᡳᡳᡳ, ᡳᡳᡳ), u (ᡳᡳᡳ, ᡳᡳᡳ), or uu (ᡳᡳᡳ, ᡳᡳᡳ), its transliteration is "f".

B. Statistical Analyses of Manchu Grapheme Encoding Annotation

Fig.1 illustrates the frequency of 112 Manchu letter variants across the 15,935 words in the dataset, with the pie chart displaying increasing frequencies from the inner to the outer segments. Fig. 1(a) presents the usage frequencies of the 112 Manchu graphemic variants attested in the 14,275 printed word tokens. Among them, ten variants are unattested; thirty-four occur between one and one hundred times; sixty-eight are recorded more than one hundred times; the most frequent variant, M002, appears 13,159 times. Fig. 1(b) reports the frequencies of the same 112 graphemic variants within the 2,805 handwritten word tokens: twenty-three variants are absent; forty-five occur between one and one hundred times; forty-four are attested more than one hundred times.



(a) the frequency in printed dataset



(b) the frequency in handwritten dataset
